

# K.O.R.C. RARITY REPORT

2016

## 1. KORC Rarity Adjudication

KORC meets quarterly each year to review and adjudicate submitted Rarity Forms for species that are considered Accidental, Vagrant, Rare and Scarce, as well as other specified species that have low and infrequent occurrence.

The completed Rarity Forms are reviewed, discussed and are either accepted or not by the KORC committee members who are all based in Kuwait. Consensus must be reached for a decision, but if a decision cannot be reached, then the external adjudicators are asked for their opinion for a final decision. Acceptance of any submitted record requires a majority vote by the Committee.

The 2016 KORC Committee:

***Mike Pope (MP)*** - Kuwait (Chairman, voting member)

***Abdulrahman Al-Sirhan (SIR)*** - Kuwait (Secretary, voting member)

***Markus Craig (MC)*** - Kuwait (voting member)

***Neil Tovey (NT)*** – Kuwait (voting member)

***Humoud Al-Shayji (HS)*** – Kuwait (voting member)

***Oscar Campbell (OC)*** – Abu Dhabi (External Adjudicator and voting member)

***Peter Kennerley (PK)*** - England (External Adjudicator and voting member)

Thanks and acknowledgement must be given to our enthusiastic group of birders in Kuwait who through their passion and photography continue to promote awareness of Kuwait's diverse bird life and the challenges that they face, especially on migration.

## 2. First Records for Kuwait (Category A and C)

No new species were recorded during 2016 and this marks the first time since 2003 that a new species has not been recorded in Kuwait which is quite a remarkable considering that period spans 13-years.

### 3. Rarities recorded for Kuwait in Category A and C

Although no firsts were recorded during 2016, there was a healthy number of good records of other vagrants.

2<sup>nd</sup> record; Red-crested Pochard, Hawfinch

3<sup>rd</sup> record; Red-footed Falcon, Calandra Lark

4<sup>th</sup> record; Taiga Flycatcher

5<sup>th</sup> record; Red Knot, Greater White-fronted Goose

The list of all rarities recorded during 2016 is reflected in the table below:

## 5. Breeding Records

Again, we were a little more diligent this year in recording breeding species, but it is still an area that could be improved upon.

Ferruginous Duck (a IUCN NT Species) has continued to breed at JPR which is really encouraging given the favourable conditions at this reserve with respect to both permanent water and habitat.

Although the phenomally fast-growing Phragmites Reeds may not be good for birders; it is certainly attracting many species of bird to breed in spring and summer, but it still needs to be managed, to ensure that the pools and waterways are not lost to the reeds.
