

K.O.R.C. RARITY REPORT

2017

1. KORC Rarity Adjudication

KORC meets quarterly each year to review and adjudicate submitted Rarity Forms for species that are considered Accidental, Vagrant, Rare and Scarce, as well as other specified species that have low and infrequent occurrence.

The completed Rarity Forms are reviewed, discussed and are either accepted or not by the KORC committee members who are all based in Kuwait. Consensus must be reached for a decision, but if a decision cannot be reached, then the external adjudicators are asked for their opinion for a final decision. Acceptance of any submitted record requires a majority vote by the Committee.

The 2017 KORC Committee:

Mike Pope (MP) – Chairman and voting member

Abdulrahman Al-Sirhan (SIR) – Secretary and voting member

Markus Craig (MC) - Voting member

Neil Tovey (NT) – Voting member

Humoud Al-Shayji (HS) – Voting member

Omar Al Shaheen (OS) – Voting member

Oscar Campbell (OC) – Abu Dhabi (External Adjudicator and voting member)

Peter Kennerley (PK) - England (External Adjudicator and voting member)

Thanks and acknowledgement must be given to our small but enthusiastic group of birders in Kuwait who through their passion and photography continue to promote awareness of Kuwait's diverse bird life and the challenges that they face, especially on migration. Many thanks also to our visiting international birders who find and report good birds during their spring and autumn passage tours.

It is encouraging to note the eBird is fast becoming the platform of choice for logging bird sightings in Kuwait and this adds to the knowledge base for the distribution and abundance of species in Kuwait, now and in the future.

This report has been collated with the best available information at the time, so if you spot any errors or omissions, please do let any of the Committee Members know, so it can be rectified.

2. First Records for Kuwait (Category A and C)

Following the 'drought' of 2016 where no new species were recorded in Kuwait, this has been rectified in 2017 when two (2) new species were recorded within 2-days of each other in late November. These species were Grey-throated and Pale Martin respectively.

A possible Green-headed Wagtail is currently under review and could be the 3rd new species for 2017, if accepted by the Committee.

3. Rarities recorded for Kuwait in Category A and C

Along with the two firsts recorded during 2017, there was also a healthy number of good records of other vagrant species.

2nd record; Black-legged Kittiwake

3rd record; Lesser Flamingo (returning winter visitor, recorded in both Jan and Dec), Winter Wren, Eastern Bonelli's Warbler, Black-legged Kittiwake, Hawfinch, Purple Sunbird,

4th record; White-tailed Eagle, Pygmy Cormorant, Radde's Accentor, Sooty Shearwater, Hawfinch, Rook

5th record; Black Scrub Robin

The list of all rarities recorded during 2017 is reflected in the table below:

5. Breeding Records

Again, we were a little more diligent this year in recording breeding species, but it is still an area that could be improved upon.

Ferruginous Duck (an IUCN NT Species) has continued to breed at JPR which is really encouraging given the favourable conditions at this reserve with respect to both permanent water and habitat.

Although the phenomally fast-growing Phragmites Reeds may not be good for birders; it is certainly attracting many species of bird to breed in spring and summer, but it still needs to be managed, to ensure that the pools and waterways are not lost to the reeds.
